

The **ONLY cloud hosted** solution
for managing recipes, menus & production.

STELLA provides hospital food service departments with a solution for managing your recipes, menus & production. The database includes thousands of recipes, up to a 21-day patient menu plan and up to a 5-week retail menu plan. Menu plans are customizable to your facility. Recipes and menus include Nutrition Facts. You are able to manage patient information i.e., diet orders, food allergies, likes and dislikes without this information leaving your secure network. With a cloud hosted solution, you do not need to have staff resources to maintain the recipes and menus.

Benefits

- Web based
- Easy for staff to use
- No need for staff resources to maintain the database
- Database is managed by DM&A RDNs and Chefs with extensive Healthcare experience
- HL7 interfaces for ADT, Orders and Allergies
- Customizable for your facility
- Lower up-front capital costs
- Can be used by Critical Access Hospitals, Acute Hospitals, Community Hospitals, Rehab facilities, Long-term care, and LTACs
- Excellent for hospital systems across regions or states

Features

- Meets requirements for HIPAA
- Diets based on the Nutrition Care Manual
- Includes common food allergies
- Easily view item/recipe nutrients in Menu Plan and Patient Ordering
- For special diets can set nutrient limits to assist in managing patient's order
- Changes to items and recipes are immediate in all sites, no need to wait for an end-of-day process to run
- HL7 interfaces
- Upgrades included
- Supports Room Service and Traditional Trayline
- Quick implementation timeline
